Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	YES

10	Demo video or walkthrough (if required)	
----	---	--

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

/Credit_Card_Approval_Prediction

```

|
├── app.py          - Main Flask application for web interface
├── model.ipynb     - Jupyter Notebook for data analysis & model building
├── best_credit_model.pkl - Trained machine learning model for prediction
├── index.html      - Landing page for user input
├── home.html       - Dashboard or home page
├── result.html     - Page to display approval status
└── README.md      - Setup and project execution guide
  
```

Localhost : https://127.0.0.1:5000

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Localhost
Login Credentials (Demo)	No
Platform / Hosting Provider	Local Machine(jupyter notebook)
Repository Link	NA
Demo Video Link	NA

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

Python 3.8 or higher installed

Flask, Scikit-learn, Pandas, and NumPy libraries

Web Browser (Chrome or Firefox)

Step-by-step Instructions:

Step 1: Download or clone the project folder to your local machine.

Step 2: Open the terminal/command prompt inside the project folder.

Step 3: Install the required dependencies using: pip install -r requirements.txt

Step 4: Run the application using the command: python app.py

Step 5: Copy the local URL provided in the terminal (usually [http://127.0.0.1:5000][http://127.0.0.1:5000]).

Step 6: Open your web browser and paste the URL to access the Credit Card Approval Prediction interface. Only supports .csv format for batch processing.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Only supports .csv format for batch processing.	Convert file format to .csv before uploading.
2	Model accuracy depends on input data quality.	Ensure data is preprocessed as per model requirement
3	Application runs only on local server.	Need deployment on cloud for global access.
