

Solution Requirements

Date	29-06-2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	User registration and secure login using email and password	High
2	Authorization levels	Different access levels for Applicants (View status) and Bank Admin (Approve/Reject).	High

3	External interfaces	Integration with AI Model API and Credit Bureau database API.	High
		Database API	
4	Transactions processing	Automating the credit score calculation and storing application status.	High
5	Reporting	Generating dashboard reports for pending and approved applications.	Medium
6	Business rules, etc.	Automate rejection if credit score is below the predefined threshold (e.g., 600).	High
7	Compliance to laws or regulations	Adherence to data privacy standards (e.g., Data encryption for sensitive user info).	High

8	Other	Email/SMS notification system for applicants regarding status updates.	Medium
---	-------	--	--------

Step 2: Non-Functional Requirements (NFR)

1	Performance & Speed	System should process and return approval status	Response time < 3 seconds.
2	Scalability	System should handle multiple concurrent user applications.	Supports 1000+ users.
3	Security & Data Privacy	Protect user financial details using encryption.	AES-256 encryption used.
4	Reliability & Availability	System should be available for access at all times.	99.9% uptime per month.
5	Usability & Accessibility	Interface should be simple and easy for all users.	WCAG 2.1 compliance.

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
------	--------------	-------------------------	-------------------------------------

6	<i>Other</i>	The code should be easy to update or maintain in the future.	High maintainability.
---	--------------	--	-----------------------
